

# Quanta-Flame Primary Control

from Acme Control Service

The **NEW TECHNOLOGY**  
direct replacement for the  
Honeywell RA890 series

**Microcomputer-Controlled  
Primary Burner Management  
Control System**

**AT LAST... an upgrade for the  
industry standard – RA890F / RA890G –  
with only ONE part to change.**

The Quanta-Flame 5004-890 is just what technicians have been waiting for – the new technology equivalent of the Honeywell RA890 series. This time-saving control uses existing Honeywell sub-bases, flamerods and UV scanners, but with significant upgrades, including an LED display and microprocessor control.

It's expensive technology brought down to earth, in an affordable and efficient control that lets you troubleshoot more burners without spending a fortune on parts.

#### **NO EXPENSIVE UPGRADES**

- Uses Q270 sub-base and existing Honeywell UV sensors and flame rods
- No rewiring necessary
- No special scanners needed

#### **MORE FLEXIBILITY**

- Selectable trial for ignition: 3, 5, 10 or 15 seconds
- Selectable interrupted or intermittent (non-interrupted) pilot
- Selectable recycle or non-recycle modes
- Selectable flame systems: ultraviolet or flame rod sensors
- Isolated 10 Amp alarm circuit

#### **EASE OF TROUBLESHOOTING**

- Direct replacement of Honeywell RA890F and RA890G
- Optional plug-in diagnostic display installs easily in the top of the control
- Microcomputer control simplifies fault and relay testing
- Test mode for pilot flame adjustment
- Operational status check: seven front-mounted LED indicators

ALL MODELS FEATURE UV SENSOR AND RECTIFYING FLAME CIRCUITS®.
